

EMS Intranet

Brian W. Smith
Under the Hood with the New EMS Website
Cardinal Health

April 23, 2004

Agenda

- Site Objective
- Server and IIS Details
- Programming Details
- Site Review
- Site Support
- Brief look at the Admin Site
- Q&A

Objective of Intranet Site

- Provide up to date information to end users.
- Provide automated processing and real time reporting.
- Provide a gateway for end users to communicate directly with an EMS representative.
- Provide correct up to date information to reduce the total amount of help desk calls received regarding E-Mail.
- Allow users to easily find the information and tools they are looking for.

Programming Details

Many different programming languages have been used to accomplish many different tasks. All code has been fully commented to allow updates if needed. Because this is an intranet site you will find many Solution files that would be removed from an Internet site. Folder browsing has been turned off and this should be adequate for an intranet server.

Programming Languages Used on Site

- Visual Basic.Net
- Visual Basic Script
- Java Script
- C#
- ASP.Net
- ASP
- XML
- HTTP
- Action Script

EMS Homepage

The Homepage to EMS Intranet site should be welcoming to the user by using corporate approved colors and an easy to navigate system.

EMS Homepage Cont...

Menu.swf

Menu.swf was created with Macromedia's Flash. In designing the site many different options were considered, but Flash was the best suited. By using a Flash menu we were able to produce a professional looking menu and reducing the complexity of maintaining multiple HTML menus. When changes are made to the menu, they are made in one file.

EMS Homepage Cont...

Index

Index.htm is designed to give the user a quick look at what is currently happening in E-Mail. This page shows Current Issues, Scheduled Changes, and Top Projects. All 3 headers have links to their individual pages.

The screenshot shows a Microsoft Internet Explorer browser window displaying the 'E-Mail Services Global Support Site'. The address bar shows 'http://dubemsapp01/index.htm'. The page content includes a 'Welcome' message, a description of the site's purpose, a 'Latest News' section, and a table with three columns: 'Current Issues', 'Scheduled Events', and 'Top E-Mail Projects'. The 'Current Issues' column shows 'No Issues to Report'. The 'Scheduled Events' column shows 'None at this time'. The 'Top E-Mail Projects' column lists several projects: 'Syncor Migration', 'Microsoft SP4 Rollout', 'Trend Micro 6.2 Scanmail Upgrade', 'RDC Implementation', and 'Microsoft Hot fix Rollup Rollout'. A link for 'Completed Projects' is also visible. A footer note advises users to use on-site navigation tools.

EMS Homepage Cont...

Index Cont...

- “Current Issues” will contain information on any long term Priority 1 issues.
- Any scheduled outages should appear in the “Scheduled Events” area.
- “Top E-Mail Projects” will contain a list of current E-Mail services projects.
- **These sections must be kept up to date and updated often.**

Clarify Case Request

The Clarify Case Request forms allow our Technical Contacts at remote sites, who do not have Clarify, to submit a ticket directly into the Clarify system. Once the form is submitted an email is sent to Cardinal Messenger, where Clarify Email Clerk generates a Clarify case based on the emails contents.

Cardinal Health's E-Mail system is currently being monitored by multiple applications. These applications include but are not limited to Microsoft Operations Manager (MOM), Compaq Insight Manager (CIM), and Quest's Spotlight on Exchange. We have Tier II and Tier III support available 24/7 to respond to any catastrophes that may occur. Tier III on-call carries a wireless E-Mail device to be alerted as soon as something may happen. If the issue happens to slip through the monitoring systems, on-site Tier I support are well educated on the path of escalation.

Please see the links to the left for more information on the status of Cardinal Health's E-Mail environment.

CAH 70 88 60 24 detail

Issue	Information
<u>Delegation:</u>	Delegation with Outlook 2000 and Exchange 2000 in the Cardinal Health environment should not be used as primary means to delegate activities within your business unit. After working with Microsoft Premium Support for two months, Email Services has reached a final conclusion. According to Microsoft, they don't support the use of 'external associated account' and delegation rights at the same time as configured with the Cardinal Environment. Therefore, current technical workarounds should be considered "use at your own risk". Moreover, Email Services currently employs this technique since it is necessary to work with legacy domains. Ideally, if all business units were using Windows 2000 this would not be a problem. For more technical information refer to the links to the left of this paragraph. You may also contact your Tier 2 representative for additional information.

Done  Unknown Zone (Mixed)

Virus/spam Cont...

Anti-Virus

The Anti-Virus page is designed to provide a visual representation of the number of Viruses blocked by Trend in the past 7 days.

The graph uses an HTML page containing a Flash movie, using action script, to query an ASP.Net page that queries SQL and returns XML data to the flash file. The flash file in turn uses this data to map a graph showing trends for the past 7 days including real time stats for the current day. Although this graph is fairly accurate, it does not count the number of viruses that may have been stopped by XWALL due to attachment blocking.

The page also uses code provided by Trend Anti-Virus detailing the latest Viruses released.

Anti-spam

- The Anti-spam page utilized the same code to create the Anti-Virus Graph with minor changes. The Anti-spam graph has been extended to allow a better view of the large numbers.
- Two Visual Basic scripts have been created to run every day to collect XWALL data from every SMTP server and insert the data into SQL. The first script is run on each SMTP server to parse the very large XWALL log for the current data needed. This script is run on each SMTP server at 12:15 AM daily. Another script is run on DUBEXSM01, at 2:00 AM, to gather the data from each SMTP server and insert it into the SQL database.

SPAM Documentation:

- [SPAM FAQ](#)
- [SPAM diagram](#)

Total Number of SPAM messages stopped since 3/24/2004: 1,414,598

SPAM stopped from 4/7/2004 to 4/13/2004

User Feedback

- User Feedback allows users to leave Feedback for EMS. The user can select to leave the feedback anonymously or request feedback.
- This page uses ASP.Net with C# to place the data entered from the form into feedback.xml. The ViewFeedback admin page uses Feedback.xls to view the information in feedback.xml.

Intranet Site Support

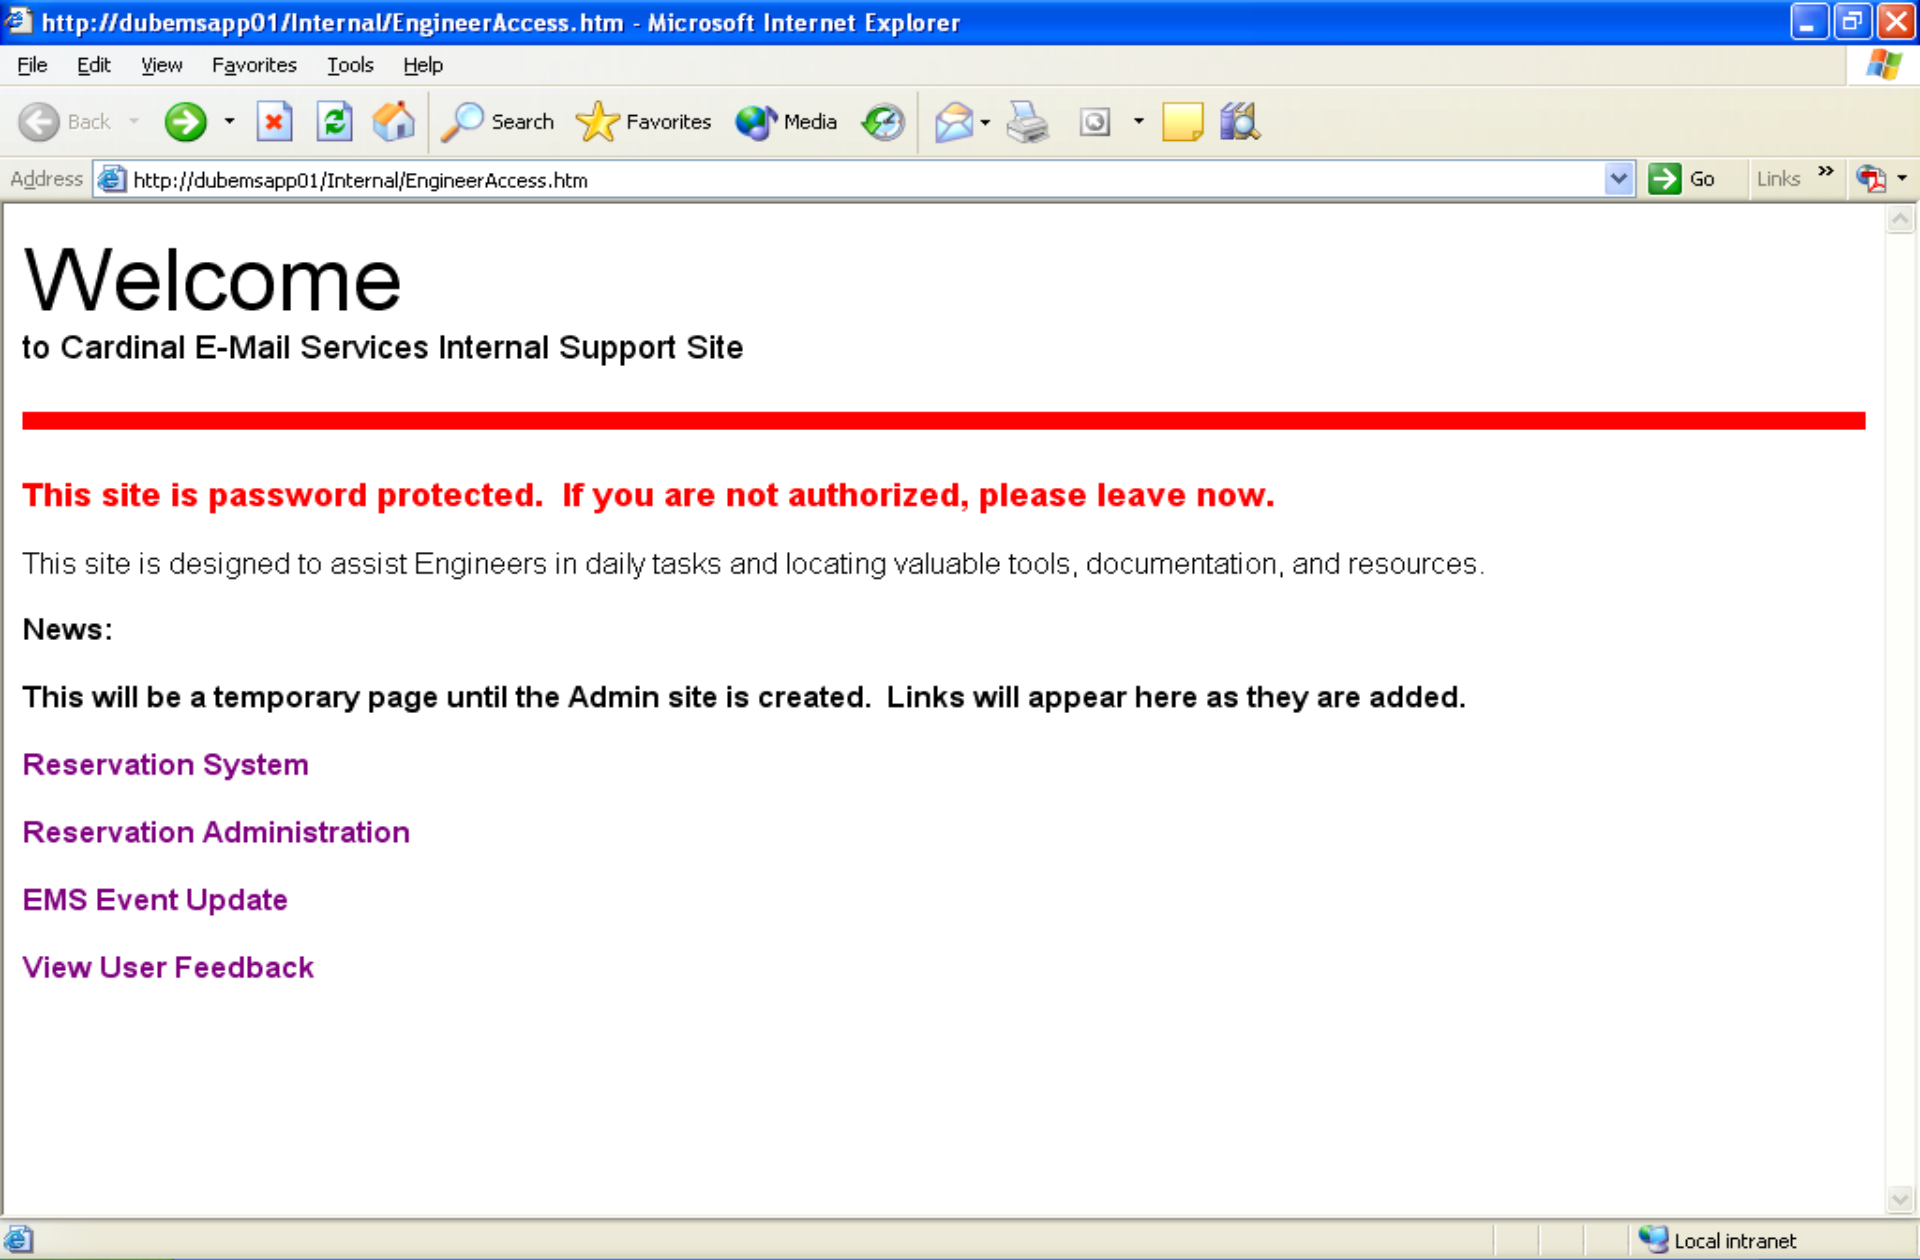

This site has been designed to reduce manual updates as much as possible. By doing this, the site can be updated and changed without needing access to any HTML editing software.

The current state of the site requires Microsoft FrontPage to complete the updates. 99% of the updates to be completed should only be by remote updates, not requiring anything to be uploaded to the server. By doing this we are able to reduce the chances of disrupting service.

Admin Site

Current State

- As Pages are created links will be added to the Admin Homepage.
- Security has been set only allowing “G-Exchange Full Administrators” access to this site. This allows us to place passwords and other documents users should not see on this site.

Admin Site Cont...

Reservation System

The Reservation System was designed to remove the confusion from the lab hardware. In the past no one knew who was using what hardware with what IP addresses. This system allows an EMS Engineer to check out a server for a period of time. Once the form has been completed and E-Mail is sent to Tony Dorto, Brian Hanlin, and the requesting Engineer. The data entered is also inserted into a SQL database, and put into a “pending” state.

Vision

- The Admin site will contain all information needed to support Exchange. This page will include the Server Support Database, Contact numbers, and documents.
- I would also like to create a FAQ/Knowledge base. This page could be a place to search all issues we have encountered with the fix we performed. I would also like the FAQ to contain a form for EMS members to enter any questions that arise that they do not know (IE “Which lotus notes server is still routing mail to Exchange?”). Later an EMS member can access this question and submit it to the searchable FAQ/Knowledge Base.

Q&A

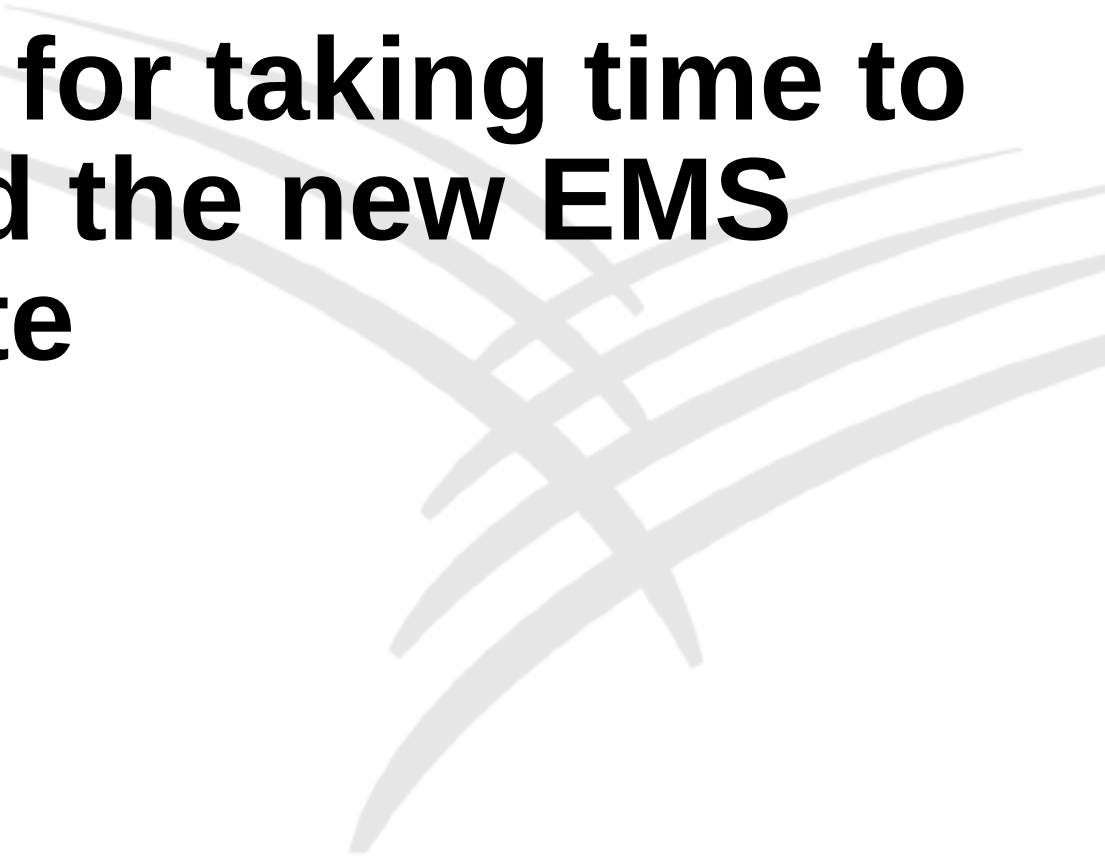

CardinalHealth

**Thank you for taking time to
understand the new EMS
Intranet Site**
